Law enforcement, intelligence experts at the CIA have said that Iranian forces have carried out a string of recent attacks against U.S. assets in Iraq and Syria and that the Islamic Republic has also attempted to send fighters into the midst of an active American rescue operation in a failed effort to capture a drone it claimed to have shot down. Intelligence officials said the Iranian attacks against U.S. forces in Iraq and Syria over the past year, in addition to the planned attempt to capture the drone, have already resulted in the deaths of American troops. In an interview published Sunday with the London Telegraph, a top official at the CIA said, "We have seen a substantial increase in Iranian and Shiite militia activity over the past year," "They've carried out scores of

**Portable Computer was an early alternative to Apple's Macintosh, which uses its operating system to provide multimedia and real-time imaging applications to the public. The Apple 512 originally promised a 10 MHz processor in an ultrathin object weighing less than three pounds, but the real-time graphics capabilities of the Apple 512 were never realized. The 120 MHz Motorola 68000 processor in the Atari 512 and 520 beat the Apples 512 processor by nearly twenty percent and the DX PC beat the Apple 512 by almost twenty percent. Though the Atari's system ROM uses 68020 instructions and the DX uses 68030 instructions, the DX is almost a pre-DX Chip for the Motorola 68000, replacing only the a few registers and bypassing the instruction causing the delay and a couple of the SIGNED-NUMBER instructions. The Atari DX made use of three Motorola 68030 chips instead of the dual 68000 CPU, two graphics boards for graphics and a modem for communications, foreshadowing the dual-CPU, modem "Apple 1" which was released the same year. I'm talking about the original Apples 512 with the slide out keyboard and the "dual" screens. 16bit WORD at 30hz 960×640 displays, 8 bit 4 bit sound, switchable controls, blue and purple monochrome screens. I also had a minidisk in it, and my mother could run 2 different wallpapers at once instead of just one. The Apple 512 with its quirky sound and AT&T supported modem (odd) started out as a "\$100 PC" in head to head (paper) tech reports from respected CS magazines. The Atari 512 and 520 with better sound and "prosumer" graphics overcame this with amazing comp cards designed to emulate the Apple and Zenith graphics board which could handle more than the AT&T serial modem could supply. **fact we'd hook the Modem (and vibrator) up to an extra graphics card in our "computer", and run that without the CPU while we ran the CPU graphics apps. The 68020 was perfect for the 512 and "Solaris" as it is in most people's minds other than purists. The 49-50 was perfect for graphics and edit/pull down apps for our area (and for the industry alike). And the 68000 was also good for what they did, but always had another mode for the Black and White display or for alpha graphics (except the Atari 512 which did neither of those). The 68020 was perfect for the**

**Two Brothers fight for the future of humanity in a visually stunning new “first-person shooter” with a story of family and survival. Players will choose from eight different Soldiers with unique powers to battle against a threat that has been confined to artificial intelligence. Combat is all about timing and fluidity; close-range with a precision-guided rifle or high-caliber shotgun, or back-blast your opponent with highly destructive weaponry from up to 1.5 miles away. Each Soldier has an arsenal of up to four weapons at their disposal for versatile combat solutions. Players can engage in several types of play: PvE, which takes place in three distinct Sandbox environments; Multiplayer, which supports up to 25 players**

**online; and Survival, the PvE crucible mode of game play, in which players compete against one another to see who can make it past the 24 hour mark. 2 Kings was built from the ground up on Unreal Engine 3. It takes advantage of the graphics power of the PlayStation 3 architecture to bring players sweeping, jaw-dropping visuals that push the limits of current generation hardware. Among the game's visual effects are dynamic weather and environmental conditions, lights and particles, cloth and hair dynamics, and an advanced particle system that generates over 100 million small particles per second. Mobile Revolution Touchscreen and wireless controllers will be supported through a cross-game compatibility program with PlayStation mobile software. Controllers will be optimized for use across multiple platforms, including PS3, PSP and PlayStation Vita.**

**Photos/Multimedia** The game features integrated social media connectivity to promote player-to-player communication. From the initial PlayStation Network release, players can easily and seamlessly upload photos and videos of themselves in the game, sharing them with friends both in and outside of the PlayStation community. Players will also be able to create digital videos for the game. Social features also include video chatting features that allow players to converse with their
