What's New In Internet Notification?

Internet Notification can display the current state of your computer through different tray icons, tray icon's tooltip and sound. The user can customize the connected/disconnected sound notification. Turn on/off sound notification The Internet Notification sets up a sound for you to let you know if your computer has successfully connected to the internet. You can manually turn on/off the sound, or keep it on as you want. Switch the connected icon or disconnected icon into "Show Tooltip" mode to get the state information. Automatically switch the icon back into normal mode when the connections are stable. The Internet Notification also enables the status icons to be moved to another place with its "Option" and "Reset" buttons. The user is able to choose to move these icons to any other place. In addition, if the user wants to shorten the icon size, just press "Option" button and a dialog box will show up. Users can choose the icon size which is very suitable for each different monitor's resolution. Displays the three status of current connection. Displays the current connection state: connection, disconnection, failed. It will also display your status. This is very helpful for you to monitor the system behavior. The frequency is adjustable. You can also adjust the current connected time duration. Please remember to backup your log file. Internet Notification Screenshots: www.cgsoft.com/vn/script_notif.zip InfoBrowser is a tool to easily view and retrieve information on any website.
