Cracking Adobe Photoshop is not as straightforward as installing it. It requires a few steps to bypass the security measures that are in place. First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you need to disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

There are certainly many free online alternatives available. Craig-B wrote a very thorough list of some online alternatives . When it comes to online storage and editing, Flickr is probably the best. I share Flickr with some friends who use the Pixelmator photo editing group . It helps that Pixelmator's free version is much less capable than Lightroom. I'm going to be writing about that soon. You may ask, then, how does Lightroom stand up to its competitors, especially online ones? Far more than just a simple backup or editing tool, Adobe's Photoshop is a full-fledged toolset for editing photos, or any media image, to create professional-level final prints that look amazing. To me, this is why I'm on the fence about upgrading to Photoshop CS4. Because I've been using both Lightroom and Photoshop for editing photos, I have a good idea of the feature differences and capabilities. And Lightroom has given me a great sense of satisfaction. It also lets me do things that I couldn't do in LR3 — like label slides, or put in my own paper textures. I could put a custom paper texture on a slide, and it worked great. If I were to upgrade to Photoshop CS4, it will allow me to do that, too. Currently, there are two issues that limit me from upgrading to Photoshop CS4. First, I don't want to pay for version upgrades. So far, I don't see a way to upgrade from CS2 to CS4 without paying for the upgrade. Second, although Adobe touts Lightroom as having all-new features in CS4, I haven't been able to see the new features announced so far, nor can I find any suggested release date (like a release candidate) for a public test or preview. The only date-related information I've found is for the Cloud Teampoint beta, which is due out October 30th.
